

## I. **Basic Concepts**

1. Quantum Superposition
2. Qubits
3. Single-Qubit Transformations
4. Entanglement
5. Entanglement and Quantum Indistinguishability
6. The Controlled NOT Gate
7. The EPR Argument and Bell's Inequality
8. Comments

## II. **Quantum Cryptography**

1. What is Wrong with Classical Cryptography?
  - i. From SCYTALÉ to ENIGMA
  - ii. Keys and Their Distribution
  - iii. Public Keys and Quantum Cryptography
  - iv. Authentication: How to Recognise Cinderella?
2. Quantum Key Distribution
  - i. Preliminaria
  - ii. Security in Non-orthogonal States: No-Cloning Theorem
  - iii. Security in Entanglement
  - iv. What About Noisy Quantum Channels?
  - v. Practicalities
3. Quantum Key Distribution with Single Particles
  - i. Polarised Photons
  - ii. Phase Encoded Systems
4. Quantum Key Distributions with Entangled States
  - i. Transmission of the Raw Key
  - ii. Security Criteria
5. Quantum Eavesdropping
  - i. Error Correction
  - ii. Privacy Amplification
6. Experimental Realisations
  - i. Polarisation Encoding
  - ii. Phase Encoding
  - iii. Entanglement-Based Quantum Cryptography
7. Concluding Remarks

## III. **Quantum Dense Coding and Quantum Teleportation**

1. Introduction
2. Quantum Dense Coding Protocol
3. Quantum Teleportation Protocol
4. Sources of Entangled Photons
  - i. Parametric Down Conversion
  - ii. Time Entanglement
  - iii. Momentum Entanglement
  - iv. Polarisation Entanglement

5. Bell-State Analyser
  - i. Photon Statistics in a Beamsplitter
6. Experimental Dense Coding with Qubits
7. Experimental Quantum Teleportation of Qubits
  - i. Experimental Results
  - ii. Teleportation of Entanglement
  - iii. Concluding Remarks and Prospects
8. A Two-Particle Scheme for Quantum Teleportation
9. Teleportation of Continuous Quantum Variables
  - i. Employing Position and Momentum Entanglement
  - ii. Quantum Optical Implementation
10. Entanglement Swapping: Teleportation of Entanglement
11. Applications of Entanglement Swapping
  - i. Quantum Telephone Exchange
  - ii. Speeding up the Distribution of Entanglement
  - iii. Correction of Amplitude Errors Developed due to Propagation Entangled States of Increasing Number of Particles

#### **IV. Concepts of Quantum Computation**

1. Introduction to Quantum Computation
  - i. A New Way of Harnessing Nature
  - ii. From Bits to Qubits
  - iii. Quantum Algorithms
  - iv. Building Quantum Computers
  - v. Deeper Implications
  - vi. Concluding Remarks
2. Quantum Algorithms
  - i. Introduction
  - ii. Quantum Parallel Computation
  - iii. The Principle of Local Operations
  - iv. Oracles and Deutsch's Algorithm
  - v. The Fourier Transform and Periodicities
  - vi. Shor's Quantum Algorithm for Factorisation
  - vii. Quantum Searching and NP
3. Quantum Gates and Quantum Computation with Trapped Ions
  - i. Introduction
  - ii. Quantum Gates with Trapped Ions
  - iii. N Cold Ions Interacting with Laserlight
  - iv. Quantum Gates at Non-zero Temperature

#### **V. Experiments Leading Towards Quantum Computation**

1. Introduction
2. Cavity QED-Experiments:
 

Atoms in Cavities and Trapped Ions

  - i. A Two-Level Scheme Coupled to a Quantum Oscillator
  - ii. Cavity QED with Atoms and Cavities Resonant Coupling: Rabi Oscillations and Entangled Atoms

- iii. Dispersive Coupling:  
Schrödinger's Cat and Decoherence
- iv. Trapped-Ion Experiments
  - v. Choice of Ions and Doppler Cooling
  - vi. Sideband Cooling
- vii. Electron Shelving and Detection of Vibrational Motion
- viii. Coherent States of Motion
  - ix. Wigner-Function of the One-Phonon State
  - x. Squeezed States and Schrödinger Cats with Ions
  - xi. Quantum Logic with a Single Trapped  ${}^9\text{Be}^+$  Ion
  - xii. Comparison and Perspectives
- 3. Linear Ion Traps for Quantum Computation
  - i. Introduction
  - ii. Ion Confinement in a Linear Paul Trap
  - iii. Laser Cooling and Quantum Motion
  - iv. Ion Strings and Normal Modes
  - v. Ions as Quantum Register
  - vi. Single-Qubit Preparation and Manipulation
  - vii. Vibrational Mode as a Quantum Data Bus
  - viii. Two-Bit Gates in an Ion Trap Quantum Computer
  - ix. Readout of the Qubits
  - x. Conclusion
- 4. Nuclear Magnetic Resonance Experiments
  - i. Introduction
  - ii. The NMR Hamiltonian
  - iii. Building an NMR Quantum Computer
  - iv. Deutsch's Problem
  - v. Quantum Searching and Other Algorithms
  - vi. Prospects for the Future
  - vii. Entanglement and Mixed States
  - viii. The Next Few Years

## VI. Quantum Networks and Multi-Particle Entanglement

- 1. Introduction
- 2. Quantum Networks I:  
Entangling Particles at Separate Locations
  - i. Interfacing Atoms and Photons
  - ii. Model of Quantum State Transmission
  - iii. Laser Pulses for Ideal Transmission
  - iv. Imperfect Operations and Error Corrections
- 3. Multi-Particle Entanglement
  - i. Greenberger-Horne-Zeilinger states
  - ii. The Conflict with Local Realism
  - iii. A Source for Three-Photon GHZ Entanglement
  - iv. Experimental Proof of GHZ Entanglement
  - v. Experimental Test of Local Realism Versus Quantum Mechanics
- 4. Entanglement Quantification
  - i. Schmidt Decompositions and von Neumann Entropy
  - ii. Purification Procedures

- iii. Conditions for Entanglement Measures
- iv. Two Measures of Distance Between Density Matrices
- v. Numerics for Two Spin 1/2 Particles
- vi. Statistical Basis of Entanglement Measure

## VII. **Decoherence and Quantum Error Correction**

- 1. Introduction
- 2. Decoherence
  - i. Decoherence: Entanglement Between Qubits and Environment
  - ii. Collective Interactions and Scaling
  - iii. Subspace Decoupled From Environment
  - iv. Other Forms of Couplings
- 3. Limits to Quantum Computation Due to Decoherence
- 4. Error Correction and Fault-Tolerant Computation
  - i. Symmetrisation Procedures
  - ii. Classical Error Correction
  - iii. General Aspects of Quantum Error correcting Codes
  - iv. The Three Qubit Code
  - v. The Quantum Hamming Bound
  - vi. The Seven Qubit Code
  - vii. Fault-Tolerant computation
- 5. General Theory of Quantum Error Correction and Fault Tolerance
  - i. Digitisation of Noise
  - ii. Error Operations, Stabiliser, and Syndrome Extraction
  - iii. Code Construction
  - iv. The Physics of Noise
  - v. Fault-Tolerant Quantum Computation
- 6. Frequency Standards

## VIII. **Entanglement Purification**

- 1. Introduction
- 2. Principles of Entanglement Purification
- 3. Local Filtering
- 4. Quantum Privacy Amplification
- 5. Generalisation of Purification to Multi-Particle Entanglement
- 6. Quantum Networks II:
  - Communications over Noisy Channels
    - i. Introduction
    - ii. Ideal Communications
    - iii. Corrections of Transfer Errors:
      - The Photonic Channel
    - iv. Purification with Finite Means
- 7. Quantum Repeaters
